

### \*\*\*BASIC WHMCS REGISTRAR MODULE INSTALLATION\*\*\*

Extract the full folder “internetbs” and its content under:

/YourLocalPath/whmcs/modules/registrars

Remember to replace “/YourLocalPath” with the actual location where you installed WHMCS.

Double check your previous operation; “internetbs” should appear under the following path:

/YourLocalPath/whmcs/modules/registrars/

2) From WHMCS administration page enable our module:  
"Setup->Products/Services->Domain Registrars" and look for “**Internetbs**” and click the “**Activate**” button. Then click the “**Configure**” button and:

**For production/live** enter your API key and password as provided by us.

**For testing** just tick the "TestMode" checkbox and enter the following credentials:

API key: testapi

Password: testpass.

Now click the button named “Save Changes”.

The screenshot shows the WHMCS configuration interface for the Internet.bs registrar module. At the top, the 'Internet.bs' logo and the breadcrumb '» Internetbs' are highlighted with a red circle. To the right are 'Activate', 'Deactivate', and 'Configure' buttons. The main configuration area contains several fields: 'Username' with the value 'testapi', 'Password' with masked characters, 'TestMode' with a checked checkbox, 'HideWhoisData' with a checked checkbox, and 'SyncNextDueDate' with a checked checkbox. Each field has a descriptive label. At the bottom, a 'Save Changes' button is highlighted with a red circle.

**NOTE:** If you plan on configuring the cron job to synchronize expiration dates of your domains (useful when you have pending transfers or have autorenewal enabled for your domains in your account on our system) when the “SyncNextDueDate” checkbox is not checked the script will only update the status and the expiration date. If you check the “SyncNextDueDate” it will also update the Next Due Date which determines the time when WHMCS will issue a new invoice for the domain. **This only applies if you are using our custom sync script and not the WHMCS built in domainsync.php script (from the crons folder).**

After clicking “Save Changes” go to “Setup->Products/Services->Domain Pricing” and from the drop down list select “Internetbs” for each TLDs (domain extension) you want to manage using our module. For more details please refer to the picture below:

Domains/TLDS

This is where you configure the TLDs that you want to allow clients to register or transfer to you. As well as pricing, you can set which addons are offered with each TLD, if an EPP code is required for transfers, and whether registration should be automated and if so, with which registrar.

TLD	Pricing	DNS Management	Email Forwarding	ID Protection	EPP Code	Auto Registration		
.fr	<a href="#">Open Pricing</a>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Internetbs	⬆	⬇
.com	<a href="#">Open Pricing</a>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Internetbs	⬆	⬇
.net	<a href="#">Open Pricing</a>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Internetbs	⬆	⬇
.us	<a href="#">Open Pricing</a>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Internetbs	⬆	⬇
.it	<a href="#">Open Pricing</a>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Internetbs	⬆	⬇
		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Internetbs		

Save Changes Duplicate TLD

Domain Addons

Currency	DNS Management	Email Forwarding	ID Protection
USD	0.00	0.00	0.00

Save Changes

Copy trademarkClaim.php to root of your WHMCS installation.  
Copy trademarkClaim.tpl to the your current template directory.

Copy internetbs\_updatewhoisservers.php and internetbs\_domaincheck.php and paste to /  
YourLocalPath/whmcs/.

Run the following url in your browser  
***YourWhmcsUrl/internetbs\_updatewhoisservers.php***

**IMPORTANT NOTE:** If you want to enable premium domains in whmcs, you need to make sure that you define an exchange rate between USD and your currency in Admin the menu Setup→Payments→Currencies. Our module explicitly sets USD when checking the price for premium names and USD price will be sent back to us when confirming the price for the premium name at registration time. Also you need to enable premium domains for your API KEY in your account in the reseller settings page (need to change “Allow premium domains operations” from NO to YES).

**\*\*\*ADVANCED WHMCS REGISTRAR MODULE INSTALLATION\*\*\***  
**\*\*\*supporting .eu, .be, .it, .fr, .re, .asia, .us and .uk \*\*\***

**IMPORTANT NOTE:** If you are upgrading from a previous version of our module please execute the following SQL query on the WHMCS database:

```
UPDATE `tbldomainsadditionalfields` INNER JOIN `tbldomains` ON
`tbldomains`.id=`tbldomainsadditionalfields`.`domainid` SET
`tbldomainsadditionalfields`.`name`='VATTAXPassportIDNumber' WHERE
`tbldomainsadditionalfields`.`name`='VAT/TAX/Passport/ID Number' AND
`tbldomains`.`registrar`='internetbs'
```

In order for WHMCS to support .eu, .be, .it, .fr, .re, .asia, .us and .uk domains, you have to perform the following additional steps:

- 0) Complete the BASIC MODULE INSTALLATION first.
- 1) Copy the file **itterms.html** to the root of your WHMCS installation
- 2) For WHMCS version below 7

Open the local file **/YourLocalPath/whmcs/includes/additionaldomainfields.php**

and append the following line at the very end of the file:

```
include(ROOTDIR."/modules/registrars/internetbs/internetbs_additionaldomainfields.php");
```

For WHMCS version 7 onwards

Open the local file

**/YourLocalPath/whmcs/resources/domains/dist.additionalfields.php**

and append the following line at the very end of the file:

```
include(ROOTDIR."/modules/registrars/internetbs/internetbs_additionaldomainfields.php");
```

For .it you also need to copy the file **itterms.html** from the archive into the root folder of your whmcs installation. (**/YourLocalPath/whmcs/**). This file contains the .it terms and conditions in English. If you want to use the Italian version use the file **itterms-it.html** but rename it **itterms.html**.

### \*\*\*HOOK INSTALLATION\*\*\*

If you are updating module in order to detect hook file - "hooks.php" and to start running it for the module, you must edit and resave domain registrar configuration. This file contains validations for domain.

### \*\*\*Multilingual Support\*\*\*

To add support for multiple languages, please do as following steps.

1. Begin by opening existing language file "italian.php" in folder "languages".
2. Save the file with new name and save it to "lang/overrides" in WHMCS root directory. Give the name for which you want to add translation. For example, For Italian language save it as "italian.php"
3. Translate the words and phrases contained within it into your new language. Be careful not to change key names, only the words and phrases contained within the quotes on each line.

We have included translation for Italian language. To make it available in WHMCS do as following steps.

1. In “lang” folder of your WHMCS root directory, create folder “overrides” (If not exists).
2. Copy file “italian.php” from “languages” folder to “overrides” folder.

You can now configure your price list and enjoy our module!
